Content Audit Report
March 27, 2026

54/100

Content Health Score
(moderate)

Based on content analysis — connect Google Analytics for a complete score

100% of your posts have zero structured data — AI systems can't cite what they can't read.

[tended.app](#)

Executive Summary

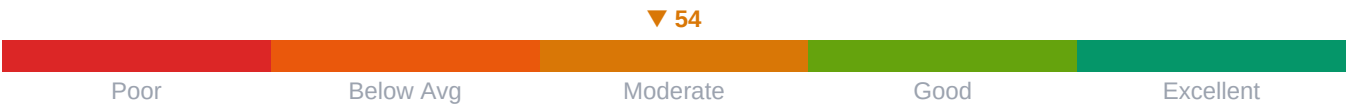

Your site **backlinko.com** scored **54/100** on content health, meaning your content ecosystem is showing moderate issues that need attention. We generated **461 specific recommendations** across your content. We found **628 content issues** (7 thin-content pages, 47 orphan posts) and **23 cannibalization pairs** where 32 of your 149 posts have significant content overlap.

149 Posts Analyzed	11 Topic Clusters	628 Issues Found
------------------------------	-----------------------------	----------------------------

Includes: structured data additions, meta description rewrites, internal linking maps, content consolidation briefs, FAQ section templates, heading restructures, and freshness date additions.

Key Findings

- 32 of your 149 posts have significant content overlap (23 cannibalization pairs detected)
- 47 orphan posts have no inbound internal links
- 7 posts are too thin relative to cluster average
- **100% of posts have no structured data (structured data) — missing Article/FAQ markup that increases AI Overview citations**

Content Profile

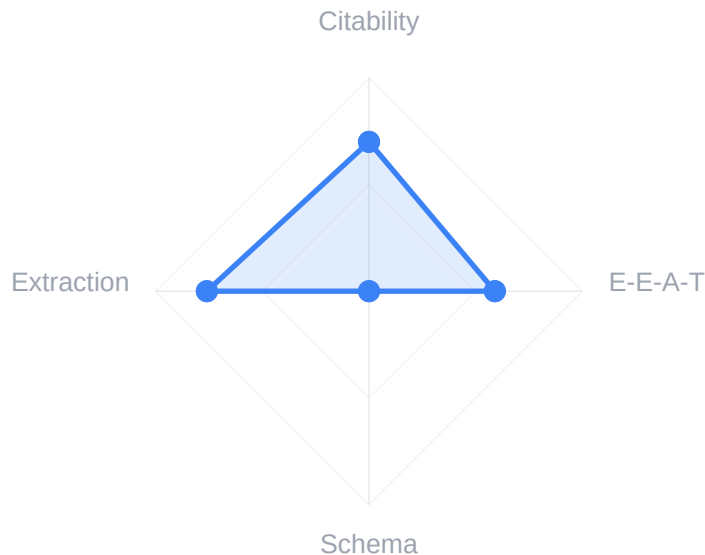

- Average post length: **3,095 words** (deep-form content)
- Average readability: Flesch **59** (professional audience level)
- Content freshness: **81%** updated in last 12 months — but 19% are stale and may drag down cluster health
- **Your content structure scores 70/100 on AI citability**

Structured data is standard practice for content sites competing in AI Overviews — yours has none.

AI Readiness

Your content scores **70/100** on AI citability — but **0/100** on structured data.

70 /100 Citability	59 /100 E-E-A-T	0 /100 Schema	76 /100 Extraction
------------------------------	---------------------------	-------------------------	------------------------------

Why AI systems skip your content

- 100% of your posts have no structured data — invisible to Google rich results (enhanced search listings)
- Only 13% of section headings are question-format — AI systems prioritize question-answer pairs (target: 30%)
- Only 11% of posts have FAQ sections — posts with FAQ structured data get significantly higher AI visibility

What this means: Without structured data, your posts are invisible to Google's rich results and less likely to be cited in AI Overviews. Adding Article structured data is the single highest-impact change you can make. Google AI Overviews now appear on ~50% of searches.

Issue Breakdown

- **7** Thin content posts — too short to rank competitively
- **47** Orphan posts — no internal links, invisible to crawlers
- **574** SEO issues (title length, missing meta, no headings) — reducing search visibility
- **23** Content overlap pairs — 32 posts may dilute each other

Individual posts may appear in multiple categories. Total reflects deduplicated issue count.

Topic Clusters

Your content organizes into 11 topic clusters. Top 3 shown.

Cluster	Posts	Health	Status
Content Marketing SEO	21	56	Healthy
Digital Marketing Research	17	53	Declining
SEO and Search	17	55	Healthy

Status based on content freshness trends and structural health, not score alone

Top 3 Quick Wins

1. Add structured data to your top posts

None of your 149 posts have structured data. Adding it enables rich results and AI citations.

→ Enables rich results for 100% of your 149 posts

2. Consolidate or differentiate: "The 17 Most Important SEO..." vs "SEO Copywriting: The..."

These posts are 89% similar and may dilute each other's search visibility.

→ Eliminate ranking competition between these 2 pages

3. Fix 47 orphan posts with internal links

FAQ structured data makes your Q&A; content machine-readable for AI systems and Google rich results.

→ Qualifies 1 post for FAQ rich results eligibility.
